

EXPLANATORY NOTE
with scientific and legal justification
to the proposals for inclusion in the draft normative legal act being
prepared to implement paragraph 14 of Decree of the President of the
Republic of Uzbekistan No. PF-193 of 11 September 2026

Edition of 3 October 2026. English companion translation; the Russian edition is primary. The structure follows paragraph 84 of the Unified Methodology appended to the Law “On Normative Legal Acts”; the scientific and legal justification is set out in Section 13 as other information needed to justify the draft.

1. Basis for preparation and necessity

Subparagraph “a” of paragraph 13 of Decree PF-193 provides that from 1 January 2027 need is studied and families are included in the Social Registry through a multidimensional assessment system that takes into account, *in addition to the family’s financial condition*, chronic illness, disability, external labour migration and large family size. Subparagraph “b” provides for a point-based scoring of socio-economic condition and assignment of families to categories by its results. Paragraph 14 instructs the National Agency for Social Protection under the President of the Republic of Uzbekistan (hereinafter, the Agency), jointly with the Ministry of Economy and Finance, to submit the draft normative legal act to the Presidential Administration by 1 December 2026[1].

The need for the proposed norms is supported by the following.

First, the decision is made automatically. Under stage 6 of the Scheme for Including Families in the Social Registry (Annex 1 to the Regulation on the Procedure for Maintaining the Social Registry), the “Ijtimoiy reyestr” information module recognizes or refuses a family and assigns its category “automatically”[2]. In a point-based system the category depends on which side of a threshold the score falls. Every threshold, its equality case and every exception therefore directly determine a family’s access to assistance.

Second, the law requires an automated decision to be explained. Article 24 of the Law “On Personal Data” obliges the owner and/or operator to explain to the data subject the procedure for a decision based solely on automated processing and its possible legal consequences, to give the opportunity to object, and to notify the result of considering the objection in writing within ten days[4]. Point 37 of the Regulation provides only an SMS about inclusion or refusal[2].

Third, practice shows unjustified refusals. The Government portal reported on 17 July 2026 that in 184 mahallas all 2,000 applications received in one month were refused without grounds; appeals to the President on Registry inclusion rose one and a half times since the start of the year, from 30,000 to 46,000; and the Prosecutor General’s Office was instructed to strictly oversee proper main-

tenance of the Registry[6]. The report does not attribute these refusals to the formulas examined in this note; it shows that wrong decisions can be detected and corrected only if the grounds of each decision are retained and reproducible. The World Bank’s 2026 poverty and equity assessment states that the targeting formula was revised in early 2026 and that an assessment of its effectiveness is not yet available[12].

Fourth, four inconsistencies have been demonstrated in the current calculation rules. Three of them (points 26, 27 and 33 of the Regulation) are removed by the amendments in Section II of Material 1 (Table 1); the fourth, concerning families in difficult life circumstances, requires the developer’s decision and is set out in Section 7. In addition, point 37 of the Regulation does not secure the requirements of Article 24 of the Law “On Personal Data”. Because the family’s financial condition remains a criterion from 1 January 2027, the income calculation rules continue to determine the assessment result until replaced.

Table 1. Demonstrated inconsistencies in the current Regulation

Rule	Demonstrated result	Proposed correction
Point 27: household plot area $TEM = UM - QM - \min(0.2 UM; 200)$	Where buildings cover more than 80 % of a plot of up to 1,000 m ² , the area becomes negative. Example: $UM = 100$, $QM = 90$ gives -10 m ² and $-4,760$ soum of monthly normative income (minimum wage 1,360,000 soum, mahalla coefficient 1). A fully built-up 1,000 m ² plot gives -200 m ² and $-95,200$ soum per month. Negative income understates the family’s income.	Section II, point 2: a negative result is taken as $TEM = 0$.
Point 32, subpoint “a” of point 33, subpoints “a” and “b” of point 39	Where average monthly income per member <i>equals</i> minimum consumption expenditure (715,000 soum in 2026), the refusal ground “higher than expenditure” does not apply and, absent other refusal grounds, the family is recognized under point 32; but categories “a” and “b” of point 39 and point 3 of Decree PF-258 require income <i>below</i> expenditure. A first-time applicant without a “mahalla seven” recommendation is assigned to no category.	Section II, point 3: refusal where income is <i>equal to</i> or higher than expenditure, aligning the Regulation with Decree PF-258.

Table 1. Demonstrated inconsistencies in the current Regulation

Rule	Demonstrated result	Proposed correction
Point 26: normative income for remittances	If the transfer is compared as a monthly average, for countries listed in Annex 6 a transfer of 2,719,999 soum is counted as 4,080,000 (three minimum wages), while 2,720,000 is counted as 2,720,000. A one-soum increase in the actual transfer reduces counted income by 1,360,000 soum. The comparison period (month or three months) and the comparison where several family members are abroad are not stated.	Section II, point 1: normative income applies where the monthly average transfer from a family member is below the normative income established for that member; counted income does not fall as the transfer rises. For transfers from Annex 6 countries between 2M and 3M per month, counted income rises to 3M, as smaller transfers are already counted today.
Point 37	Only an SMS about inclusion or refusal is provided; explanation of the automated decision procedure, its legal consequences and the procedure for protecting rights (Article 24, part three, of the Law “On Personal Data”) is not secured.	Section II, point 4: decision grounds, legal consequences, objection and rights-protection procedure through the personal account and Inson centres.

All figures in the table are reproduced by the program in the electronic supplement; the method and full results are in Section 13 (39 automated checks pass; independent arithmetic control of 4,105 constructed cases of the area formula, of which 620 give a negative area). The calculations show the inconsistencies for the specified admissible inputs; they do not establish how the current software handles those inputs or how many families are affected — that is determined on the Agency’s data (Subsection 13.5).

2. Author of the proposal

The proposal was prepared by citizen Abduxoliq Akmal ugli Ashuraliyev, independent researcher (ORCID 0009-0003-5482-5526). The official developers of the draft under paragraph 14 of Decree PF-193 are the Agency jointly with the Ministry of Economy and Finance. Article 23 of the Law “On Normative Legal Acts” requires the developer to study results of scientific research and appeals of individuals, and to generalize and use proposals of citizens and recommendations of scientists and specialists[5].

3. Purposes, tasks and main provisions

The purpose is to ensure that each family's assessment result follows only from approved rules, can be reproduced from retained data and is explained to the applicant. The tasks are: remove uncertainty at threshold values; check software before changes are applied; retain the grounds of each result; and eliminate the four demonstrated inconsistencies in the current Regulation.

Points of Material 1	Content	Justification
Section I, point 1	Terms: methodology, assessment result, calculation version, control example, control calculation, unconfirmed data	Methodology paragraph 8: repeatedly used terms are defined at the beginning.
Point 2	Responsibility of Information Technologies Centre staff for conformity of calculations to the methodology	Point 46 of the Regulation already makes the Centre's responsible staff responsible for correct operation of the YAMIH system; the norm defines the subject of that responsibility — conformity of calculations to the approved methodology.
Points 3–7	For each criterion: source, unit, period, scoring, rounding, value for unconfirmed data; category at equality; order of exceptions; calculation examples; date of application	Without these elements the same income is counted differently (Table 1; Subsection 13.3.4). The current Regulation already contains a calculation example (point 30); Chile's methodology states thresholds as "equal to or greater than" and gives a precedence rule when several checks apply[7].
Point 8	Software applies only established conditions	A new refusal ground is established by a normative act, not by a software setting.
Points 9–10	Non-receipt of a reply is not absence of income; marking of the criterion, repeat request within one working day, notice to the applicant; no refusal solely because of unconfirmed data	Separates a technical failure from a fact (point 48 of the Regulation allows a temporary algorithm change during failures[2]); the applicant can use the right to have personal data corrected within three days (Article 11 of the Law "On Personal Data"[4]); a family does not lose assistance because of a data-exchange failure.

Points of Material 1	Content	Justification
Points 11–12	Mandatory content of the control example set, including combinations of exceptions; expected scores and results determined without the software developer	The errors in Table 1 lie at thresholds, next to them and in exceptions. A wrong score can produce the same category, so scores are also checked. An expected result produced by the same software does not reveal a software error.
Points 13–16	Comparison of scores and results before first application and before changes to the methodology, parameters or software; no application while a difference remains; protocol with mandatory content; set supplemented	Uses the existing commissioning procedure; the protocol records who checked what. A temporary algorithm change during failures (point 22) is not delayed.
Point 17	Information retained for the retention period of the result, including access to the methodology edition, parameters and executable software version	A version number alone does not allow the calculation to be repeated; access to the rules, parameters and software themselves is therefore retained. Allows an objection to be answered on the merits and all decisions affected by an error to be found.
Points 18–19	Information to the applicant; special data of other family members only as the fact a criterion applied	Article 24, part three, of the Law “On Personal Data”: explanation of the decision procedure, its legal consequences, objection and rights-protection procedure; Article 25: health and conviction data are special data[4].
Points 20–21	The Centre identifies affected results within ten days; the Agency reviews them within one month and notifies the applicants	The information under point 17 allows affected results to be selected by a query on the calculation version and criterion values and recalculated with the corrected software, so ten days suffice to identify them. This is an operational justification; the period in Article 24 of the Law “On Personal Data” concerns an individual objection and is not borrowed here. The developer may set other periods. Consequences for assistance awarded are determined by legislation.

Points of Material 1	Content	Justification
Point 22	Recording of the temporary-algorithm decision, its grounds and period; check of results within ten days after restoration	A temporary algorithm change does not become a hidden permanent rule; results produced during a failure are checked promptly.
Point 23	Financing	Section 10.
Section II, points 1–4	Amendments to points 26, 27, 33 and 37 of the Regulation	Table 1, Section 13 and Section 14.
Section III	The amendments to points 26, 27 and 33 apply to new applications and reassessments; the category of families already included is retained until their next reassessment	The amendments to points 26 and 33 may make some families ineligible (Section 10); the transitional provision prevents an unscheduled worsening of the position of families already included.

4. Regulation at the level of law

The proposals relate to the subordinate act mandated by paragraph 14 of Decree PF-193. No draft law is proposed.

5. Expected results

1. No household-plot area calculation gives a negative value (at present this occurs where $QM > 0.8 UM$ for plots up to 1,000 m² and where $QM > UM - 200$ for plots over 1,000 m²).
2. For each threshold of the methodology the category at equality is determined; a family with income equal to minimum consumption expenditure receives a determinate result.
3. A family's counted income does not fall when its actual remittance increases.
4. Each assessment result can be reproduced from retained data; when an error is found, all affected decisions are identified within ten days.
5. The applicant receives the grounds of the automated decision, information on its legal consequences and the objection and rights-protection procedure, as required by Article 24, part three, of the Law "On Personal Data".

6. Foreign experience

Chile's Ministry of Social Development and Family publishes the procedure for calculating the socio-economic rating of the Social Household Registry, approved by Resolution No. 082 of 15 November 2023, with worked calculation examples, thresholds stated as "equal to or greater than" and an explicit precedence rule when several checks are triggered for a household[7]. The World Bank notes that out-

dated registry data lead to both inclusion and exclusion errors, and that grievance redress mechanisms enhance transparency and accountability[8].

7. Description of content and a question for the developer's decision

Section I of Material 1 (23 points, each containing one legal norm in accordance with Methodology paragraph 22) is included in the act being prepared. Section II (4 points) amends the current Regulation and Section III (1 point) contains a transitional provision; if the new act replaces the Regulation, the same rules are included in its norms.

Question for the developer's decision. For families in difficult life circumstances, subparagraph “v” of paragraph 3 of Decree PF-258, together with item (i) of note (b) to its Annex 1, assigns to the “family at the poverty boundary” category families whose income, calculated with the 25 % reduction coefficient, is from P to $1.5P$ [3]. Points 34–35 of the Regulation set for the same procedure the conditions $D > P$ and $A = 0.75D \leq 1.5P$, that is $P < D \leq 2P$, with no lower bound on reduced income. The Regulation therefore includes families with $P < D < 4P/3$ whose reduced income is below P : for example, a family with income of 858,000 soum ($1.2P$; reduced income 643,500 soum) is included under point 35 but does not fit the Decree's interval. In addition, subpoint “v” of point 39 of the Regulation does not state that the interval applies to reduced income for these families; applied to ordinary income it would exclude families with $1.5P < D \leq 2P$ (for example, 1,287,000 soum). Once subpoint “a” of point 33 is amended (Material 1, Section II, point 3), a family with $D = P$ also enters this procedure, so the mismatch covers $P \leq D < 4P/3$; the condition $A \geq P$ also removes this case. One of two options must be chosen: add the condition $A \geq P$ to points 34–35 of the Regulation, which excludes families with $P < D < 4P/3$ from new inclusion, while families already included retain their category until the next reassessment, by analogy with Section III of Material 1; or amend Decree PF-258 so that the interval for this procedure matches points 34–35. Under either option, subpoint “v” of point 39 states that reduced income applies to these families. Points 4–5 of Section I prevent such an inconsistency in the new methodology.

8. Amendments to other acts

Section II amends the Regulation on the Procedure for Maintaining the Social Registry (Annex 1 to Cabinet of Ministers Resolution No. 35 of 29 January 2026). The amendment of point 33 aligns the Regulation with point 3 of Decree PF-258 and does not require amending the Decree. Amendment of Decree PF-258 may be needed only for the question in Section 7.

9. Justification of references

Points 19, 20 and 21 of Section I refer to points 18, 17 and 20 of the same Section to avoid repeating their text (Methodology paragraph 13). Point 13 refers to point

22 so that the comparison does not delay a temporary algorithm change during data-exchange failures. Point 15 of Section I refers to the established procedure for commissioning and changing information systems without naming a specific act: references to specific acts of lower legal force are not permitted (Methodology paragraph 11), and the type of the act being prepared is determined by the developer. Section II names the amended act and its points (Methodology paragraph 69).

10. Financial and economic justification

The proposed funding approach is implementation within the funds provided for maintaining and developing the YAMIH system (Material 1, Section I, point 23), subject to the Agency's assessment of its capacity and the fiscal consequences:

1. No new bodies, posts, information systems or application stages are created; the existing YAMIH system, commissioning procedure, personal account on the Unified Portal of Interactive Public Services and Inson centres are used.
2. The set of control examples and the program calculating them have been prepared by the author and are provided free of charge with these materials.
3. Agency resources will be needed for changes to the software and applicant explanations, retention of the information needed to repeat calculations, control calculations and review of affected decisions. The scope of this work depends on the design of the YAMIH system and existing contracts and can be determined only by the Agency; the author has no data for a reliable cost estimate.
4. Correcting wrongful refusals revealed by verification may increase assistance expenditure. This is a lawful consequence of applying the current rules correctly, not a new benefit.
5. The amendments to points 26, 27 and 33 do not enlarge the circle of recipients: counted income does not fall, and a case without a category is removed. At the same time, the amendments to points 26 and 33 may make some families ineligible. The amendment to point 26 raises to $3M$ the counted income of families with transfers from Annex 6 countries between $2M$ and $3M$ per month: for example, a family of four whose only income is a transfer of 2,720,000 soum per month is now counted at 680,000 soum per person (below P) and after the amendment at 1,020,000 soum (above P). The amendment to point 33 excludes from the primary categories families with income exactly equal to P .
6. Removing the non-monotonicity does not in itself require choosing the higher normative income. The alternative — a normative income of $2M$ for Annex 6 countries — enlarges the circle of recipients and requires expenditure. It is proposed that the option be chosen after the Agency assesses the aggregate impact of both options on its data. Section III of

Material 1 retains the category of families already included until their next reassessment.

The exact number of families affected by each amendment is determined by the Agency on its data using the attached program, without transferring personal data outside the Agency.

11. Discussion and coordination

The proposal is submitted under Article 20 of the Law “On Normative Legal Acts” and Article 3 of the Law “On Appeals of Individuals and Legal Entities”. Discussion on the portal and coordination with interested bodies are conducted by the developer. Article 23 of the Law “On Normative Legal Acts” requires materials of the discussion of a draft to be submitted to the adopting body together with the draft; part 2 of Article 21 provides for placing information on the preparation of the most important socio-economic drafts on the portal, and Article 24 provides for placing the draft on the portal before it is submitted to the adopting body[5]. As of 1 October 2026, none of the 40 drafts placed on the discussion portal since 11 September 2026 is the draft under paragraph 14 of Decree PF-193[9].

12. Answers to possible objections

Objection	Answer
The current rules will be replaced from 2027	Financial condition remains a criterion (Decree PF-193, paragraph 13, subparagraph “a”). Until replacement the Regulation applies; on replacement the same corrections are included in the new norms. Section I concerns the new methodology itself.
Software is already tested	Section I uses the existing commissioning procedure (point 15). It requires only a minimum content of the example set: each threshold, the values next to it and each exception (point 11). If existing tests cover this, there is no additional work.
Existing powers suffice (Article 20 of the Law “On Normative Legal Acts”)	The proposals are made to an already mandated draft, not to initiate a new act. The inconsistencies in Table 1 are in the text of a normative act and can be removed only by amending that text. The right to an explanation of an automated decision is established by law and requires a defined channel.
The number of affected families is unknown	The inconsistencies arise for the specified admissible inputs regardless of their frequency in the population. The number of affected families determines the scale, not the existence of the error; the Agency can determine it with the attached program.

Objection	Answer
Costs	No new bodies or systems are created; the Agency’s work and possible higher payments when wrongful refusals are corrected are described in Section 10; implementation within existing funds is proposed subject to the Agency’s assessment.
Disclosure of information	Only information about the applicant’s own family is disclosed; special personal data of other family members are shown only as the fact that a criterion applied (Article 25 of the Law “On Personal Data”); source code and security information are not disclosed.

13. Scientific and legal justification

This Section contains other information needed to justify the draft (Methodology paragraph 84): the research question, input data, method, results, their link to the proposed norms and the procedure for reproducing the calculations.

13.1. Research question and input data

The research question is stated so that it can be refuted: **do the published income and category rules give a single, internally consistent result at the thresholds and throughout the declared input domain?** The finding is refuted by an error in transcribing a rule, an omitted applicable exception, a narrower lawful input domain or a disagreement with independent arithmetic.

Official texts of the acts on lex.uz as of 30 September — 1 October 2026 were used: Decree PF-193, Resolution No. 35 (consolidated with the amendments made by Cabinet Resolutions No. 271 of 21 May 2026 and No. 393 of 20 July 2026), Decree PF-258, and the Laws “On Normative Legal Acts”, “On Personal Data” and “On Appeals of Individuals and Legal Entities”[1, 2, 3, 5, 4, 13]. Resolution No. 35 and Decree PF-193 are officially published in the state language; amendment wording follows the Uzbek text.

Monthly minimum consumption expenditure per person in 2026 is $P = 715,000$ soum[11]; the minimum wage from 1 September 2026 is $M = 1,360,000$ soum[10].

13.2. Method

13.2.1. Objects and units

Let Y be the family’s counted income over three months and N the counted number of members; monthly income per person is $D = Y/(3N)$ (point 18 of the Regulation). The formulas for individual income contributions and the category conditions are checked; full aggregation of Y from administrative data is not reproduced. The September 2026 value of M is used only in dated single-month calculations.

Calculations are performed by the reference program (electronic supplement). Numbers are entered as integers or strings of decimal and rational numbers; exact rational arithmetic is used, so equality comparisons are not distorted by binary rounding. Floating-point numbers, invalid divisors and incomplete data are rejected.

13.2.2. Prespecified plan and case selection

The list of checks and the case grids were fixed in the analysis plan before calculations were run. Income grid: P , $1.5P$, $2P$ with offsets of -1 , 0 , $+1$ soum. Difficult life circumstances: values around P , $4P/3$, $1.5P$, $2P$. Land formula: all integer building areas QM from 0 to UM for $UM = 100, 1,000, 1,001, 2,000$ m² (4,105 cases in total). Remittances: an unknown value and values around $2M$ for both country groups under two possible comparison periods. Tax base, self-employment and goats: prespecified points.

The grids are constructed domains, not a sample of families. The number of violating cases in a grid characterises the formula's domain, not the share of families in Uzbekistan; shares of families can be determined only on the Agency's data (Section 13.5).

13.2.3. Legal computational conditions

Subpoint “a” of point 33 refuses recognition as a “state-supported family” or “poor family” where $D > P$; point 32 recognizes the family where there is no refusal ground; subpoints “a” and “b” of point 39 and point 3 of Decree PF-258 assign families with $D < P$ to these categories[2, 3].

For difficult life circumstances $A = 3D/4$. Points 34–35 of the Regulation allow inclusion in the “family at the poverty boundary” category where $D > P$ and $A \leq 1.5P$. Subparagraph “v” of paragraph 3 of Decree PF-258, with item (i) of note (b) to Annex 1, sets for this procedure the interval from P to $1.5P$ on reduced income A ; subpoint “v” of point 39 of the Regulation repeats the interval without naming the type of income.

Household plot area (point 27): $TEM = UM - QM - \min(0.2 UM; 200)$ m² over the domain $0 \leq QM \leq UM$; monthly normative income $TEM \cdot 0.035 M \cdot k/100$, where 100 m² is one sotix and k the mahalla land-tax coefficient. The calculations take $k = 1$ because actual mahalla coefficients were not used; for another k the amounts are multiplied by k .

Remittances (point 26): if the amount of transfers is not determined or is less than $2M$, normative income cM applies, where $c = 3$ for countries listed in Annex 6 and $c = 2$ for other countries. Because the comparison period is not stated, both readings were calculated: comparison of a monthly amount q and of a three-month total.

13.2.4. Verification of results

Results were verified in four ways: reproduction of the official example in point 30; manual inequalities; a separate checking program that does not use the cal-

culuation module and recomputes all 4,105 land cases, 12 hardship cases, 24 tax cases, 16 remittance cases and 6 goat cases with integer expressions; and automated tests. All 39 tests pass (17 checks of the Regulation’s rules, 12 checks of the synthetic scoring example and 10 provenance checks that reject an outdated, altered or incomplete result).

13.3. Results

13.3.1. *Official example and equality to the threshold*

The example in point 30 of the Regulation gives $6,480,000/(5 \cdot 3) = 432,000$ soum per person per month; the difference from the published answer is zero.

At $D = P = 715,000$ both conditions $D > P$ and $D < P$ are false. The refusal ground of subpoint “a” of point 33 does not apply and, absent other refusal grounds, the family is recognized under point 32, but it does not satisfy the condition of categories “a” and “b” of point 39. A first-time applicant without a “mahalla seven” recommendation is assigned to no category. The control case of a family previously removed from a primary category falls, at $D = P$, within the interval of subpoint “v” of point 39, confirming that the cases are correctly separated.

The proposed amendment of subpoint “a” of point 33 (“equal to or higher” instead of “higher”) closes this case without amending Decree PF-258: the refusal condition becomes the exact complement of the category condition $D < P$ in point 3 of the Decree.

13.3.2. *Difficult life circumstances: the Regulation is wider than the Decree*

The conditions of the special procedure simplify exactly:

$$D > P, \quad \frac{3}{4}D \leq \frac{3}{2}P \quad \Longleftrightarrow \quad P < D \leq 2P. \quad (1)$$

Under the Decree the interval applies to reduced income: the condition $A \geq P$ is equivalent to $D \geq 4P/3$. The Regulation additionally includes families with $P < D < 4P/3$; example: $D = 858,000$ soum ($1.2P$), reduced income $643,500 < P$. Subpoint “v” of point 39 of the Regulation does not name the type of income; applied to ordinary income it would exclude families with $1.5P < D \leq 2P$; example: $D = 1,287,000$ soum ($1.8P$) (Figure 1). At $P = 715,000$: $4P/3 = 2,860,000/3$, $1.5P = 1,072,500$, $2P = 1,430,000$ soum.

Figure 1. Income normalised by P . A filled endpoint is included, an open one excluded. Top line: income conditions of points 34–35 of the Regulation; bottom line: the Decree PF-258 interval on reduced income; middle line: the interval on ordinary income, intersected with points 34–35. The special procedure also requires the relevant circumstances, a recommendation and compliance with the quota.

13.3.3. Negative area in the land formula

For $UM \leq 1,000$ the formula equals $TEM = 0.8 UM - QM$ and is negative exactly when $QM > 0.8 UM$; for $UM > 1,000$ it equals $TEM = UM - QM - 200$, negative when $QM > UM - 200$. The smallest value over $0 \leq QM \leq UM$ is $-\min(0.2 UM; 200)$ m². Enumeration of 4,105 integer cases confirms the inequalities: 620 cases give a negative area (Table 2, Figure 2).

Plot UM (m ²)	Integer test cases	Negative cases	Minimum TEM (m ²)	Maximum floor change (soun/month)
100	101	20	-20	9,520
1,000	1,001	200	-200	95,200
1,001	1,002	200	-200	95,200
2,000	2,001	200	-200	95,200
Total constructed grid	4,105	620	—	—

Table 2. Calculation at $M = 1,360,000$ and $k = 1$. Counts refer to the constructed grid. The last column is the largest change in the family’s monthly normative income when the zero floor is introduced.

Example: $UM = 100$, $QM = 90$ gives $TEM = -10$ m² and $-4,760$ soum of monthly normative income; a fully built-up 1,000 m² plot gives -200 m² and $-95,200$ soum. The negative contribution reduces the family’s counted income, although an area cannot physically be negative. The proposed zero floor gives $TEM = 0$ and does not change the result where $TEM \geq 0$.

Figure 2. Solid line: current formula; dashed line: with the zero floor; for each UM all integer QM from 0 to UM are considered.

13.3.4. Remittances: counted income falls as the transfer rises

Equality $q = 2M$ does not satisfy “less than $2M$ ”. Under the monthly reading, for countries in Annex 6 counted income falls from $3M$ just below the threshold to $2M$ at the threshold: a transfer of 2,719,999 soum is counted as 4,080,000, a transfer of 2,720,000 as 2,720,000. A one-soum rise in the transfer reduces counted income by 1,360,000 soum. For other countries the monthly reading is continuous. Under the three-month-total reading, jumps arise for both groups (Table 3, Figure 3).

Conditional period	Country group	Monthly contribution drop (soum)	Per-person drop, four members (soum)
Monthly	Listed countries	1,360,000	340,000
Monthly	Other countries	0	0
Three-month total	Listed countries	9,520,000/3	2,380,000/3
Three-month total	Other countries	5,440,000/3	1,360,000/3

Table 3. Fall in counted monthly income at the threshold, soum. Rows correspond to the two possible readings of the rule.

Figure 3. Horizontal axis: q/M ; vertical axis: counted monthly income relative to M . Solid horizontal segments: countries in Annex 6; dashed: other countries; vertical line: threshold.

The proposed wording (Material 1, Section II, point 1) applies normative income where the monthly average of transfers from a family member working or carrying on entrepreneurial or other activity abroad is below the normative income established for that member. Counted income equals $\max(q; cM)$ and does not decrease as q rises; this is checked by an automated test on a 1,000-soum grid for both country groups. For other countries ($c = 2$) the result coincides with the current monthly reading. Under both readings of the current rule, the proposed wording reduces no family's counted income. For families with transfers from Annex 6 countries between $2M$ and $3M$ per month, counted income rises to $3M$, and some such families may lose eligibility; the alternative way of removing the non-monotonicity and its consequences are set out in Section 10.

13.3.5. Self-employment coefficients, tax base and livestock

Point 23 sets eight coefficients of monthly normative income for the self-employed: four territory types and two sexes. The difference between the male and female coefficient in each territory equals $0.4M = 544,000$ soum per month (Table 4). The calculation reflects normative income, not actual earnings.

Geographic class	Male base	Female base	Informal male	Informal female
Tashkent	3,672,000	3,128,000	3,855,600	3,284,400
Nukus / regional centres	3,264,000	2,720,000	3,427,200	2,856,000
Other cities	2,856,000	2,312,000	2,998,800	2,427,600
Other units	2,448,000	1,904,000	2,570,400	1,999,200

Table 4. Monthly normative contributions at $M = 1,360,000$; the informal contribution multiplies the base by 1.05 under the conditions of point 25.

Under point 24 the tax base equals the minimum at a three-month tax of $T = 6B_0/5$; below it B_0 applies, above it the base rises with slope $5/6$. The rule is

continuous and monotone; all 24 cases agree with the piecewise expression. Under point 28, 14 goats give zero ($14 \cdot 0.07 = 0.98$ equivalent head), 15 give 34,000 soum per month, 20 give 272,000 and 100 give 4,080,000. The Regulation sets no rounding rule for fractional equivalent heads; the methodology must determine it (Material 1, Section I, point 3).

13.3.6. Specification questions

The calendar offset of the three-month period in point 18 is confirmed by the example in point 30 (application in September — income for May–July) and should be recorded in the methodology as a rule. Foreign currency is converted at the rate on the date YAMIH receives the information (point 19); this date must be retained with the result so the calculation can be reproduced (Material 1, Section I, point 17).

13.4. From results to the proposed norms

Result	Proposed norm (Material 1)
Equality to the threshold undetermined (13.3.1)	Section II, point 3; Section I, points 4 and 6 — category at equality and examples in the new methodology.
Regulation wider than Decree PF-258 for hardship families (13.3.2)	Question for the developer's decision (Section 7); Section I, point 5 — a single result where exceptions apply.
Negative area (13.3.3)	Section II, point 2; Section I, point 11 — every threshold and exception is in the control example set.
Non-monotonicity and undefined period for remittances (13.3.4)	Section II, point 1; Section I, point 3 — source, unit and period of each criterion.
Rounding and exchange rate (13.3.5, 13.3.6)	Section I, points 3 and 17.
Automated decision without explained grounds (Section 1)	Section II, point 4; Section I, points 17–21.

The errors were found precisely at thresholds, in exceptions and in units. Random control examples may miss them: for instance, in an income grid with a one-soum step the equality $D = P$ is one case of three around the threshold, and in a real income distribution it is a rare value. That is why point 11 of Section I of Material 1 requires the example set to include each threshold, the values next to it and each exception. Passing a finite set of examples does not guarantee the absence of every error, but it guarantees that every threshold and every exception is checked.

13.5. Application to the Agency's data

The inconsistencies arise for the specified admissible inputs regardless of their frequency; the calculations do not establish how the current software handles those

inputs or how many families are affected. The Agency can determine that number on its data with the attached program without transferring personal data outside the Agency:

1. plots with $QM > 0.8 UM$ (where $UM \leq 1,000 \text{ m}^2$) or $QM > UM - 200$ — affected by the correction of point 27;
2. families with $D = P$ — affected by the correction of subpoint “a” of point 33;
3. families whose counted income differs between the current and the proposed rule: under the monthly reading, transfers from Annex 6 countries between $2M$ and $3M$ per month; under the three-month-total reading, also transfers from any country with a monthly average between $2M/3$ and $2M$ — affected by the correction of point 26;
4. families included under point 35 with $P < D < 4P/3$ (reduced income below P) — affected by the question in Subsection 13.3.2.

For each group the program compares the result of the current and the proposed rule. The calculation is run inside the Agency by an authorized operator; only aggregate numbers leave the Agency.

13.6. Conclusions

1. The published calculation rules are reproducible: the official example gives 432,000 soum with no difference.
2. Inconsistencies are demonstrated in four rules: an undetermined result at income equal to P ; inclusion by the Regulation of hardship families with reduced income below P , not provided for by Decree PF-258; a negative area where buildings cover more than 80 % of a plot of up to $1,000 \text{ m}^2$ (for larger plots, where $QM > UM - 200$); and a fall in counted income as a transfer rises.
3. Each inconsistency is removed by amending the text of the norm (Material 1, Section II) or by the developer’s decision (Section 7), not by a software setting.
4. For the new point-based methodology, the same classes of error are excluded by the requirements of Section I of Material 1: a determined category at equality, a single result where exceptions apply, mandatory control examples at every threshold, and retention of the grounds of each decision.

13.7. Reproduction

The electronic supplement contains the analysis plan, a dated extraction of the rules (data/rules/legal_specification.json), control cases, the program (src/social_registry/), tests (tests/), the independent check and results (results/). No network access is needed; no random numbers are used. Each result stores SHA-256 hashes of the specification and code, the command and the run time; the checking program rejects a result if the code or inputs have changed.

```
python scripts/run_analysis.py --self-test
```

```
python scripts/run_analysis.py --legal-audit
python scripts/verify_results.py
python scripts/run_project.py
```

14. Comparison table

The Regulation is officially published in the state language; therefore the current and proposed wording is given in Uzbek, with a translation of the changed words in the justification column. Changed words of the current wording are italic and underlined; new words are bold (Methodology paragraph 85).

Current wording	Proposed wording	Justification
26-band, birinchi xatboshi: «...pul o'tkazmalari miqdori aniqlanmasa yoki <i>o'tkazmalar miqdori mehnatga haq to'lash eng kam miqdorining ikki baravari miqdoridan</i> kam bo'lsa, u holda ... quyidagicha normativ daromad qo'llaniladi:»	«...pul o'tkazmalari miqdori aniqlanmasa yoki chet elda ishlaydigan yoki chet elda tadbirkorlik va boshqa faoliyatni amalga oshiruvchi oila a'zosidan kelgan o'tkazmalarning bir oylik o'rtacha miqdori ushbu bandda unga nisbatan belgilangan normativ daromaddan kam bo'lsa, u holda ... quyidagicha normativ daromad qo'llaniladi:»	“less than twice the minimum wage” becomes “monthly average from a family member working or doing business abroad less than the normative income established for that member”. Removes the fall in counted income when a transfer increases, the unspecified comparison period and the comparison where several members are abroad (Table 1).
27-band: « $TEM = UM - QM - (UM \times 20\%) \dots (UM \times 20\%)$ ko'rsatkichi 200 metr kvadratdan oshmagan holda hisob-kitob uchun qabul qilinadi.»	Oltinchi xatboshidan keyin quyidagi xatboshi bilan to'ldirilmoqda: « Formula bo'yicha aniqlangan TEM qiymati manfiy bo'lsa, TEM nolga teng deb qabul qilinadi. »	New paragraph: “If the TEM value is negative, TEM is taken as zero.” Excludes negative area and negative normative income (Table 1).
33-band «a» kichik bandi: «...bir oylik jami o'rtacha daromadi minimal iste'mol xarajatlari miqdori <u>dan</u> yuqori bo'lganda.»	«...bir oylik jami o'rtacha daromadi minimal iste'mol xarajatlari miqdoriga teng yoki undan yuqori bo'lganda.»	“higher than expenditure” becomes “equal to or higher than expenditure”. A family with income equal to expenditure receives a determinate result consistent with PF-258 point 3 (Table 1).

Current wording	Proposed wording	Justification
37-band: «Oilaning Reyestriga kiritilganligi yoki Reyestriga kiritish rad etilganligi haqida ariza beruvchining mobil telefon raqamiga SMS-xabar yuboriladi.»	Quyidagi ikkinchi xatboshi bilan to'ldirilmoqda: «Bir vaqtning o'zida ariza beruvchiga Yagona interaktiv davlat xizmatlari portalidagi shaxsiy kabinet orqali, uning murojaatiga ko'ra esa "Inson" ijtimoiy xizmatlar markazida qaror qabul qilinishiga asos bo'lgan ma'lumotlar, qo'llanilgan normativ daromadlar, qaror qabul qilish tartibi, qarorning ehtimoldagi yuridik oqibatlar, unga e'tiroz bildirish va o'z huquqlarini himoya qilish tartibi to'g'risidagi ma'lumotlar taqdim etiladi. Boshqa oila a'zolarining shaxsga doir maxsus ma'lumotlari faqat tegishli mezon qo'llanilganligi fakti sifatida ko'rsatiladi.»	New paragraph: grounds of the decision, normative incomes applied, decision procedure, its legal consequences, objection and rights-protection procedure; special data of other family members only as the fact that a criterion applied. Implements Article 24, part three, and Article 25 of the Law on Personal Data.
